## Investigations and Analysis

The Mobile lab is on site at Raymark this week and will be supporting a Vapor Intrusion study at the Nyanza site next week for OSRR. Analytical results on samples from Elizabeth Mine were released to OSRR. Analytical results for private and public wells in Greenwich Connecticut for PFAS were released to CTDEEP and CTDPH. Connecticut had questions on the results. Dan Boudreau, Peter Philbrook, Ernie Waterman and Meghan Cassidy had a conference call with Connecticut to go over the results. CT plans to do some additional work that OEME will support by doing additional analyses.
